

News From the Year 1/2

The year 1/2 class have made a very happy start to term three. We designed modes of transport for Design and Technology with the freedom of creativity and imagination. We started with a brainstorm of the transportation we knew of and then the fun began. We had to draw our ideas twice; first to get our ideas down and then, after discussion with peers, we drew it again making some changes.

Lots of us decided to mix two or more different types of transport together to make it super cool. For example, Riley made a car that transformed into a jet ski.

We used recycled materials to build our final design. Sometimes we found it tricky to balance our boxes and stick them together but everyone was really helpful and we worked together to get it done.

Below are some of the finished products of our box construction along with some questions we answered after we finished building.

Designer/Builder: Aidan

About: This is a drill and a pencil holder. There is also an eraser storage.

My favourite part: there is a secret hide out under the front leg.

The most challenging part to build: Sticking it all together.

Designer/Builder: Max

About: This is called the 'Drillinator'. It flies and drills into things.

My favourite part: I love the whole thing!

The most challenging part to build: The centre bit to make it stand.

Designer/Builder: Lucas

About: this is a jet ski. It can float on the water.

My favourite part: I like the lights on the front

The most challenging part to build: it was hard to make it stand on the pop sticks

Designer/Builder: Riley

About: this is a tank that can turn into a jet ski. It can go underwater too.

My favourite part: I like the tissue box part because it makes it go super fast. It has flames on it

The most challenging part to build: The front part
